List of Figures	ix
Foreword	xiii
Preface	xv
Acknowledgments	xvii
1. INTRODUCTION	1
1. Outline of Book	2
2. MULTICARRIER MODULATION	5
1. Multicarrier Modulation	6
2. Partitioning for Vector Coding	8
3. Partitioning for DMT and OFDM	9
4. Loading Principles	11
3. PEAK TO AVERAGE RATIO	15
1. Multicarrier Signals	15
2. Peak to Average Ratio	22
3. Statistical Properties of Multicarrier Signals	26
4. Bounds on Continuous-Time PAR using Discrete-Time Samples	29
5. Description of Memoryless Nonlinearity	39
6. Effect of Nonlinearities on System Performance	43
6.1 PSD Degradation	44
6.2 BER Increase	44
7. Limits for Distortionless PAR Reduction	52
8. Techniques for PAR Reduction	55
8.1 PAR Reduction with Distortion	56
8.2 Distortionless PAR Reduction	57
8.2.1 Coding	58
8.2.2 Discrete Parameter Optimization	59
8.2.3 Continuous Parameter Optimization	60

9. New PAR Reduction Structures	62
4. PAR REDUCTION BY TONE RESERVATION	65
1. Problem Formulation	66
2. PAR Reduction Signals for Tone Reservation	68
3. Optimal PAR Reduction Signals for Tone Reservation	71
4. Simple Gradient Algorithms with Fast Convergence	77
5. Iterative PAR Reduction as a Controlled Clipper	84
6. Tone Reservation Kernel Design	85
6.1 Computing Peak Reduction Kernels	86
6.2 Choosing the PRT Set	88
6.3 Numerical Computation of PRT and Kernel	91
7. Results	93
5. PAR REDUCTION BY TONE INJECTION	97
1. PAR Reduction using Generalized Constellations	98
2. Power Increase	103
3. Maximum PAR Reduction per Dimension Translation	107
4. Simple Algorithms for Computing $\tilde{x}[n/L]$	110
5. Results	112
6. Conclusions	116
6. MAXIMUM LIKELIHOOD DETECTION OF DISTORTED MULTICARRIER SIGNALS	119
1. Memoryless Nonlinearity effects on Achievable Rate	120
2. Maximum Likelihood (ML) Detection	124
3. Numerical Results	132
4. Conclusions	134
7. SUMMARY AND CONCLUSIONS	137
1. Book Summary	137
Index	149
