**Introduction. Design, Measurement, and Analysis Issues in AIDS
Mental Health Research**

*David G. Ostrow, Ronald C. Kessler, Ellen Stover,
and Willo Pequegnat*

1. Introduction	1
2. Balancing Scientific Rigor with Urgency in AIDS Research	2
3. Centrality of Social and Ethical Issues to Process	2
4. History of Project	4
5. Theoretical Considerations	7
6. Research Design	8
7. Recruitment and Sampling Issues	9
8. Control or Comparison Group	10
9. Instrumentation and Related Measurement Issues	10
10. Interviewing Techniques	12
11. Intervention and Treatment Issues	12
12. Criteria for Establishing Change	13
13. Data Analysis	14
14. Ethical Issues	15
15. Conclusions	15
References	15

Part I: Design and Sampling Issues

Chapter 1. Ethical Issues and Approaches in AIDS Research

Howard C. Stevenson, Dorothy De Moya, and Robert F. Boruch

1. Introduction	19
2. Historical Antecedents of Contemporary Ethical Guidelines	21
3. Ethical Principles That Apply to AIDS Research	23

4. The Empirical Study of Research Ethics	25
4.1. Intrusion, Anxiety, and Informed Consent	26
4.2. Cultural and Gender Issues in AIDS Research	27
4.3. Investigator/Respondent Interaction	30
5. Approaches to Reduce the Diminishing of Privacy and Confidentiality	31
5.1. Procedural Approaches	31
5.2. Statistical Approaches	36
5.3. Statutory Approaches	38
6. The Case of Randomized Experiments	41
6.1. Federal Judicial Center Guidelines Applied	42
6.2. Social Concerns about Randomized Experiments	44
7. Summary	48
References	49

Chapter 2. Sampling Considerations in Research on HIV Risk and Illness

Graham Kalton

1. Introduction	53
2. Probability Sampling	55
3. Screening	56
4. Disproportionate Stratification	58
5. Multistage Sampling	61
6. Multiple Frames	63
7. Multiplicity Sampling	65
8. Two-Phase Screening	66
9. Location Sampling	68
10. Snowballing	70
11. Concluding Remarks	71
References	72

Chapter 3. Quasiexperimental Designs in AIDS Psychosocial Research

Ronald C. Kessler

1. The Problem: Causal Inference in Nonexperimental Research	76
2. Some Design Solutions to the Problem	77
2.1. Regaining Inferential Power by Aggregation	77
2.2. Regaining Inferential Power by Matching	79
2.3. Regaining Inferential Power by Using a Random Component	81

2.4. The Regression Discontinuity Design	83
2.5. The Multivariate Control Approach	83
2.6. The Panel Design	84
2.7. The Interrupted Time Series Design	85
3. Using Nonexperimental Research to Develop Interventions	87
4. Summary and Conclusions	89
References	91

Part II: Measurement Issues

Chapter 4. Combining Qualitative and Quantitative Techniques to Develop Culturally Sensitive Measures

Richard A. Zeller

1. Quantitative Research: The Sample Survey	96
2. Qualitative Research: The Focus Group	98
3. Comparison and Contrast of Sample Surveys and Focus Groups	100
4. Toward a New Definition of Validity	109
5. Combining Qualitative and Quantitative Measurement	110
5.1. Using Focus Groups to Guide Questionnaire Construction	111
5.2. Using Survey Results to Guide Topic Outline Guide Construction	113
5.3. An Example	115
6. Summary	115
References	116

Chapter 5. Understanding Sexual Behaviors and Drug Use among African-Americans: A Case Study of Issues for Survey Research

Mindy Thompson Fullilove and Robert E. Fullilove, III

1. Overview	117
2. Changing Times	118
2.1. What We Knew	118
2.2. What Happened?	119
2.3. The Lessons of the South Bronx Burnout	120
2.4. Patterns of Change in the Future	120
3. Gaining Access	121
3.1. The Role of Guides	121
3.2. Gaining Trust	122

4. Learning to Listen	125
5. Giving Back	129
6. Conclusion	131
References	131

Chapter 6. Response Bias in Surveys of AIDS-Related Sexual Behavior

*Joseph A. Catania, Heather Turner, Robert C. Pierce,
Eve Golden, Carol Stocking, Diane Binson, and Karen Mast*

1. Overview	133
1.1. AIDS-Relevant Sexual Behaviors	134
1.2. Measurement Error and Participation Bias	134
2. Validity of Self-Reported Sexual Behavior	135
3. Need for Pretesting	136
4. Indices of Measurement Error	139
4.1. Overview	139
4.2. Nonresponse to Sex Questions in Telephone Surveys ...	140
4.3. Test–Retest Reliability	142
5. Respondent Influences on Measurement Error	143
5.1. Recall: Vividness, Complexity, Inferential Strategies ..	143
5.2. Recall: Emotional Issues	144
5.3. Self-Presentation Bias	145
5.4. Motivation	146
6. Instrument Variables	147
6.1. Order Effects	148
6.2. Terminology and Question Structure	149
7. Mode Effects	150
7.1. Overview	150
7.2. Self-Administered Questionnaires	152
7.3. Telephone Interviews	152
7.4. Face-to-Face Household Interviews	153
7.5. Diaries	154
8. Interviewer Variables	154
9. Conclusions	156
References	158

Chapter 7. Recollection in the Kingdom of AIDS

Robert T. Croyle and Elizabeth F. Loftus

1. Introduction	163
2. The Field of Memory	164
2.1. Two Forms of Long-Term Memory	165
2.2. Memory Errors	166

3. Health-Related Memories	168
4. Improving Memory	169
5. AIDS-Related Issues	171
5.1. Special Problems with AIDS-Related Memories	171
5.2. Recall of Stressful Life Events	172
5.3. Recall of Sexual Behaviors	173
5.4. Recall of Everyday Events	174
6. Ethical Issues in Studying AIDS-Related Memory	176
7. Research Needs	176
References	178
 Comments on Croyle and Loftus's Recollections in the Kingdom of AIDS	 181
<i>Robyn M. Dawes</i>	

Part III: Analysis and Modeling Issues

Chapter 8. Using Surveillance Data for Assessing and Projecting the AIDS Epidemic

Victor De Gruttola and Marcello Pagano

1. Introduction	189
2. AIDS Definition	190
3. Reporting Delay and Time Trend Analysis	191
4. Short-Term Projections	198
5. Survival after AIDS Diagnosis	201
6. Combining Data from Different Sources	203
7. Conclusion	203
References	203

Comment on De Gruttola and Pagano's Using Surveillance Data for Assessing and Projecting the AIDS Epidemic

John M. Karon

1. AIDS Surveillance Data	205
2. The 1987 AIDS Surveillance Definition	206
3. Reporting Delays and Completeness of Reporting	207
4. The 1993 AIDS Surveillance Definition	209
5. Methods for Estimating HIV Prevalence and Predicting AIDS Cases	210
6. Estimating Survival after a Diagnosis of AIDS	211
References	211

Chapter 9. Analytic Methods for Estimating HIV-Treatment and Cofactor Effects

James M. Robins

1. Introduction	213
2. The ACTG Trial 002: Some Background	215
3. New Methods of Analysis	218
3.1. Method 1	219
3.2. Comparison of Method 1 with Weighted Log-Rank Estimates of β_r^*	228
3.3. Dependent versus Independent Censoring by End of Follow-up.	231
3.4. Remarks on Efficiency	235
3.5. An Improvement on the Log-Rank Test with Independent Censoring by Using Surrogate Markers ..	235
3.6. Method 2	236
3.7. Method 3	240
4. Effects of Interactions	242
4.1. Treatment Arm–Prophylaxis Interaction	242
4.2. Interactions with Unmeasured Covariates	245
4.3. Interactions with Measured Time-Dependent Factors ..	245
4.4. Interactions with Measured Pretreatment Variables ...	246
5. Analysis of the Effect of Marijuana on CD4 Counts	246
Appendix 1: A Counterfactual Approach to Causal Inference in Randomized Trials	249
A1.1. Notation	249
A1.2. Estimation of the Baseline Survival Distribution	250
A1.3. Identification and Estimation of $\text{pr}[T_G > t]$	255
A1.4. Efficiency Considerations	260
A1.5. Implications of No Unmeasured Confounders for L^* -History and Death	262
Appendix 2: Plausible versus Mathematical Assumptions	264
Appendix 3: Proofs of Some Theorems	268
Appendix 4: Censoring	272
A4.1. Known Potential Censoring Time	272
A4.2. Adjustment for Censoring by Competing Risks	281
A4.3. An Improvement on the Usual Rank Estimator	285
A4.4. Adjustment for Dependent Censoring and Recovery of Information with Independent Censoring	286
A4.5. Estimation under Observational Study Assumptions in the Presence of Censoring	287
References.	288

Chapter 10. The Design and Analysis of Partner Studies of HIV Transmission

Nicholas P. Jewell and Stephen C. Shiboski

1. Introduction	291
2. Background	292
2.1. The Use of Models in Studying Infectious Disease Transmission	292
2.2. The Natural History of AIDS	298
2.3. Why Is Infectivity Information Important?	299
2.4. Previous Literature on Statistical Work on HIV Transmission	300
3. Partner Studies of HIV Transmission	301
3.1. Definition of a Partner Study	301
3.2. Data Structures for Partner Studies	301
3.3. Study Designs for Partner Studies	302
3.4. Data Collection Issues	305
4. Transmission Models for Partner Study Data	306
4.1. Time-Dependent Transmission Probabilities	307
4.2. Representations of the Infectivity Function	311
4.3. Regression Models for Additional Explanatory Covariates	312
5. Analysis of Partner Study Data	313
5.1. Data Analysis Strategies	313
5.2. Estimation Methods	315
5.3. Inference Techniques	316
6. Examples	323
6.1. Description of Studies Used	323
6.2. Results from Fitting the Constant Infectivity Model	327
6.3. Results from Fitting Time-Dependent Infectivity Models	331
7. Discussion	339
References	340
Index	343
