Preface xv

9. HIERARCHICAL THEORY OF UNDULATIVE INDUCTION ACCELERATORS (EH-ACCELERATORS) 1

1 EH-ACCELERATORS: GENERAL IDEAS AND PROPERTIES 2

1.1 Principles of Operation of EH-Accelerators 2

1.2 Comparison of Charged Particle Motions in Longitudinal Electric and Transverse EH-Undulated Fields 5

1.3 Example of the EH-Field Presentation 7

2 EH-ACCELERATOR AS A HIERARCHICAL OSCILLATIVE SYSTEM 11

2.1 Oscillations and Quasi-Resonances 11

2.2 Hierarchy of Oscillations 17

3 MOTION OF CHARGED PARTICLES IN THE NON-STATIONARY LINEARLY POLARIZED EH-ACCELERATOR 21

3.1 Analytical Solutions of the Problem of Particle Motion 21

3.2 Effect of Electron Reflection from the System Input 24

3.3 Effect of a Particle's Capture 27

4 PICOSECOND ELECTRON BUNCH FORMERS 32

4.1 Motion of an Electron Bunch in a Non-Stationary EH-System 32

4.2 Example of the EH-Former for Picosecond Electron Bunches 37

5 STATIONARY EH-ACCELERATORS 39
5.1 Elementary Theory of the Stationary Linearly Polarized EH-Accelerators 39
5.2 Inhomogeneous One-Particle Models 45
6 EXAMPLE: PROJECT OF AN ESPECIALLY COMPACT STATIONARY EH-ACCELERATOR 52
6.1 One of Possible Applications: the E-Beam Sterilizers 52
6.2 Example: the EH-accelerator for Waste and Natural Water Purification Systems 53
7 THE EFFECT OF 'COOLING' OF CHARGED PARTICLE BEAMS IN EH-ACCELERATORS 59
7.1 The Cooling Effect and the Fundamental Principles of Physics 59
7.2 Essence of the Cooling Effect 60
7.3 Homogeneous Non-Stationary Model 61
7.4 Inhomogeneous Non-Stationary Models 67
8 STATIONARY EH-COOLERS 70
8.1 Undulative Electric and Magnetic Fields in Stationary EH-Coolers 70
8.2 Single Particle Theory of the Linearly Polarized Stationary EH-Cooler 73
8.3 Optimization of the Stationary EH-Cooler 79
8.4 Inhomogeneous Model of the Stationary EH-Cooler 82

10. FREE ELECTRON LASERS AS A CLASSICAL ELECTRON DEVICE WITH A LONG-TIME INTERACTION 89
1 FREE ELECTRON LASERS: GENERAL INFORMATION 89
1.1 Place of the Free Electron Lasers in Modern Electronics 89
1.2 Priority Problem 91
1.3 Basic Physical Mechanisms and the First Theoretical Design 92
1.4 The First Realized Designs of Free Electron Lasers 104
2 GROUPING (BUNCHING) MECHANISMS IN FREE ELECTRON LASERS 107
2.1 Longitudinal Grouping Mechanism 107
2.2 Transverse Grouping (Bunching) Mechanism 114
2.3 Energy Transfer in the System 'Beam+Pumping+Signal' 115

11. HIERARCHICAL SINGLE-PARTICLE THEORY OF FREE ELECTRON LASERS 123

1 GENERAL APPROACH TO THE SINGLE-PARTICLE THEORY OF FREE ELECTRON LASERS 124

1.1 Method of Simulated Magneto-Dielectric 124

1.2 Types of Modeling Pumping Fields 130

1.3 Electron Motion in the Field of Electromagnetic Waves. Integrals of Motion 132

1.4 Reducing Initial Equations to the Standard Form 136

1.5 Classification of Models 138

1.6 Case of a Weak Magnetic Field 139

2 SINGLE-PARTICLE THEORY OF THE FREE ELECTRON LASERS OF DOPPLERTRON TYPE 142

2.1 Obtaining the Equations of the First Hierarchical Level 142

2.2 Passing to the H-Ubitron Model 144

2.3 'Efficiency-Phase' Variables 145

2.4 Model with the Optimal Electrostatic Support 146

2.5 Model with the Optimal Variation of the Retardation Factor 148

2.6 Some Approximate Analytical Solutions 149

2.7 Model with the Two-Frequency Pumping 150

3 THE SINGLE-PARTICLE THEORY OF THE FREE ELECTRON LASER WITH EH-PUMPING 154

3.1 Fields and Problem Formulation 154

3.2 Resonant Conditions 155

3.3 Truncated Equations in the Case of a Weak Magnetic Field 156

3.4 Truncated Equations in the Case of a Coupled Parametric-Cyclotron Resonance 158

3.5 Isochronous Models. The Case of a Super-Weak Magnetic Field 159

3.6 Simplified Multi-Particle Theory of the EH Free Electron Laser 161

12. HIERARCHICAL SELF-CONSISTENT THEORY OF FREE ELECTRON LASERS 169

1 GENERAL FORMULATION OF THE PROBLEM 170

1.1 General Arrangement 170

1.2 Fields and Resonances 170

1.3 Electric Support 172

1.4 Parametric Free Electron Laser as a Hierarchical Oscillative System 172

1.5 Motion Problem 173

1.6 Self-Consistent Problem 174

2 SELF-CONSISTENT TRUNCATED EQUATIONS. SIMPLIFIED VERSION OF THE METHOD OF SLOWLY VARYING AMPLITUDES 175

2.1 Statement of the Problem 176

2.2 Initial Equations 176

2.3 Truncated Equations in the Complex Form 177

2.4 Truncated Equations in the Real Form 180

2.5 Integrals of Motion 181

2.6 Raman and Compton Modes 182

3 SELF-CONSISTENT TRUNCATED EQUATIONS. METHOD OF THE AVERAGED KINETIC EQUATION. THE CUBIC DOPPLERTRON MODEL 183

3.1 Statement of the Problem 183

3.2 Transforming the Kinetic Equation into the Form with Total Derivatives 184

3.3 Scalar Part of the Fields 184

3.4 Current Density and Space Charge 185

3.5 The Problem of Large Parameters 186

3.6 Averaged Kinetic Equation 187

3.7 Wave and Single-Particle Resonant Conditions 187

3.8 Representation of the Distribution Function in the Form of a Fourier Series 188

3.9 Truncated Equations for the Slowly Varying Amplitudes of Distribution Function 188

3.10 Solving the Truncated Equation by Successive Approximations 190

3.11 Back Transformation 192

3.12 Maxwell's Equations 193

3.13 Truncated Equations for the Wave Amplitudes 194

3.14 Raman and Compton Interaction Modes 196

4 SELF-CONSISTENT TRUNCATED EQUATIONS. THE METHOD OF THE AVERAGED KINETIC EQUATION. THE CUBIC NONLINEAR H-UBITRON MODEL 197
4.1 Formulation of the Problem 197
4.2 Three-Level Hierarchical Calculational Scheme 198
4.3 Double-Averaged Kinetic Equation 200
4.4 Solutions of the Double-Averaged Kinetic Equation 200
4.5 Back Transformation on the First Hierarchical Level 201
4.6 Truncated Equations for the Complex Wave Amplitudes 203
4.7 Simplified Version of the Truncated Equations 204
5 SELF-CONSISTENT TRUNCATED EQUATIONS. THE METHOD OF SLOWLY VARYING AMPLITUDES. THE QUADRATIC KINETIC DOPPLERTRON MODEL WITH ARBITRARILY POLARIZATIONS OF THE ELECTROMAGNETIC WAVES 205
5.1 Formulation of the Problem 206
5.2 Truncated Equations for the Wave Amplitudes 207
5.3 Solving the Kinetic Equation by Successive Approximations 208
5.4 Again the Truncated Equations for Wave Amplitudes 210
5.5 Stationary Version of the Truncated Equations for Wave Amplitudes 212
5.6 Integrals of Motion 213
6 SELF-CONSISTENT QUADRATIC FEL THEORY OF THE SIMPLEST LINEARLY POLARIZED QUASI-HYDRODYNAMIC MODEL 214
6.1 Truncated Equations for the Simplest Model 214
6.2 Case of the Given Pumping Field 214
6.3 Case of Self-Consistent Changing of All Slowly Varying Amplitudes. Integration Algorithm 216
6.4 The Case of Self-Consistent Changing of All Slowly Varying Amplitudes. The Boundary Conditions Problem 219
6.5 The Case of Self-Consistent Changing of All Slowly Varying Amplitudes. The Solutions 219
6.6 The Case of Self-Consistent Changing of All Slowly Varying Amplitudes. The Passage to the Approximation of a Given Pumping Field 220

7 ANALYSIS OF THE WAVE RESONANT CONDITIONS 221
7.1 The Model of a Cold Electron Beam 221
7.2 ADE Interaction Modes in the Dopplertron FEL 222
7.3 Passing to the Case of the H-ubitron Model 224
7.4 Dopplertron Models with Retarded Pumping 224
7.5 Role of the Thermal Electron Beam Spread 226
8 SELF-CONSISTENT QUADRATIC FEL THEORY OF THE ARBITRARY POLARIZED KINETIC MODEL. THE APPROXIMATION OF A GIVEN PUMPING FIELD IN THE CASE OF THE RAMAN MODE 227
8.1 Types of Instabilities which Are Possible in the Dopplertron FELs 227
8.2 Boundary Conditions 228
8.3 Solutions 228
8.4 Threshold of Interaction 229
8.5 Passage to the H-Ubitron Model 230
8.6 Phase Effects 230
8.7 Polarization Effects 231
8.8 The Effects of Phase and Polarization Discrimination 233
8.9 The Role of the Pumping Wave Retardation in the Amplification Process 237
9 SELF-CONSISTENT QUADRATIC FEL THEORY OF THE ARBITRARILY POLARIZED KINETIC MODEL. THE APPROXIMATION OF THE GIVEN PUMPING FIELD IN THE CASE OF COMPTON MODE 238
9.1 Truncated Equations 238
9.2 Boundary Conditions 239
9.3 Solutions 239
9.4 Phase and Polarization Effects 241
10 SELF-CONSISTENT QUADRATIC FEL THEORY. THE EXPLOSIVE INSTABILITY IN THE LINEARLY POLARIZED RAMAN MODEL 242
10.1 Classification of the Self-Consistent Modes of Interaction 243
10.2 Truncated Equations. The Cold Linearly Polarized Dopplertron Model 244
10.3 Classification of Models with Explosive Instability 245
10.4 Analysis of the Synchronous Conditions (Kinematic Analysis) 245
10.5 Amplitude Analysis 246

10.6 Case of Degeneration of the Wave Frequencies 248
10.7 The Influence of Dissipation for the SCW 250

11 SELF-CONSISTENT QUADRATIC FEL THEORY. THE EXPLOSIVE INSTABILITY IN THE ARBITRARILY POLARIZED SELF-CONSISTENT RAMAN MODEL 251
11.1 Truncated Equations in the Real Form 251
11.2 Motion Integrals 252
11.3 Functions u(z) and R(z) 252
11.4 Nonlinear Potential 253
11.5 Analytical Solutions 253
11.6 Explosive Length 256
11.7 Polarization Effects 256
11.8 Explosive Instability in the Linearly Polarized Self-Consistent Compton Model 259

12 THE SELF-CONSISTENT QUADRATIC FEL THEORY. THE EXPLOSIVE INSTABILITY IN LINEARLY POLARIZED SELF-CONSISTENT COMPTON MODEL 260
12.1 The Compton Truncated Equations 261
12.2 Motion Integrals 262
12.3 Energy 262
12.4 Solutions 262
12.5 Compton Critical Length 263

13 SELF-CONSISTENT QUADRATIC FEL THEORY OF THE EFFECT OF THE GENERATION OF THE TRANSVERSE H-UBITRON FIELD 263
13.1 Two Modes of the Effect of the Generation of Additional Magnetic Field 264
13.2 Wave Nonlinear Mechanism 265
13.3 Diamagnetic Mechanism 266

14 THE DOPPLERTRON CUBIC NONLINEAR MODEL. THE EFFECT OF NONLINEAR GENERATION OF THE LONGITUDINAL ELECTRIC FIELD 268
14.1 Physical Nature of the Generated Longitudinal Electric Field 269
14.2 Wave Efficiency 269
14.3 Gain Factor 271
14.4 Numerical Analysis 271

15 DOPPLERTRON CUBIC NONLINEAR MODEL. THE ISOCHRONOUS MODEL OF A DOPPLERTRON AMPLIFIER 274

16 H-UBITRON CUBIC NONLINEAR MODEL. THE EFFECT OF NONLINEAR GENERATION OF THE TRANSVERSE PERIODIC MAGNETIC FIELD 279

16.1 Adapted System of Truncated Equations and Its Accuracy 280

16.2 Generation of the Additional Improper H-Ubitron Fields 281

16.3 Nonlinear Generation of the Proper H-Ubitron Fields 285

13. HIERARCHICAL THEORY OF TWO-STREAM SUPERHETERODYNE FREE ELECTRON LASERS 291

1 TWO-STREAM SUPERHETERODYNE FREE ELECTRON LASERS AS A NEW CLASS OF RELATIVISTIC ELECTRON DEVICES 292

1.1 History of the Problem and the Main Ideas 292

1.2 Two-Stream Superheterodyne Free Electron Laser (TSFEL): Design Schemas and Their Principles of Operation 295

1.3 Analyzed Models 298

2 THEORY OF THE TWO-STREAM INSTABILITY 302

2.1 Initial Model. Statement of the Problem 303

2.2 The Linear Approximation 304

2.3 Nonlinear Approximation 308

2.4 Analysis 311

3 THE ESSENCE OF THE EFFECT OF TWO SUPERHETERODYNE AMPLIFICATION 314

3.1 Qualitative Comparison of the Parametric and Superheterodyne Mechanisms of Amplification 314

3.2 Main Idea of the Effect of Superheterodyne Amplification 315

4 FORMULATION OF THE CUBIC NONLINEAR TWO-STREAM SUPERHETERODYNE PROBLEM 317

4.1 Model and Fields 317

4.2 Two-Stream Superheterodyne Free Electron Laser as a Hierarchical Wave–Oscillative System 319

4.3 Quasi-Compton and Raman Interaction Modes 321

4.4 Electric Support and the Effect of Nonlinear Generation of the Longitudinal Electric Field 323
4.5 Motion Problem 324
4.6 Concept of the Space Charge Waves in the Cases of Raman and Compton Modes 325
5 CUBIC NONLINEAR TRUNCATED EQUATIONS AND ANALYSIS 329
5.1 Cubic Nonlinear Truncated Equations 329
5.2 Amplification Dynamics 332
5.3 Efficiency Dynamics 334
5.4 Influence of the Effect of Nonlinear Generation of the Longitudinal Electric Field 335
5.5 Influence of the Generated Magnetic Field 338
5.6 Influence of Highest Harmonics and Longitudinal Focusing Magnetic Field 341
5.7 Klystron TSFEL Amplifiers 344
EPILOGUE 353
Appendices 355
Appendix A 355
Appendix B 359
Appendix C 361
Appendix D 363
Appendix E 365
Appendix F 367
Index 375
