

Contents

Preface	ix
1	
Optimization Software Class Libraries	1
<i>Stefan Voß and David L. Woodruff</i>	
1.1 Introduction	2
1.2 Component Libraries	3
1.3 Callable Packages and Numerical Libraries	20
1.4 Conclusions and Outlook	23
2	
Distribution, Cooperation, and Hybridization for Combinatorial Optimization	25
<i>Martin S. Jones, Geoff P. McKeown and Vic J. Rayward-Smith</i>	
2.1 Introduction	25
2.2 Overview of the Templar Framework	26
2.3 Distribution	36
2.4 Cooperation	43
2.5 Hybridization	49
2.6 Cost of Supporting a Framework	51
2.7 Summary	57
3	
A Framework for Local Search Heuristics for Combinatorial Optimization Problems	59
<i>Alexandre A. Andreatta, Sergio E.R. Carvalho and Celso C. Ribeiro</i>	
3.1 Introduction	60
3.2 Design Patterns	61
3.3 The Searcher Framework	65
3.4 Using the Design Patterns	69
3.5 Implementation Issues	74
3.6 Related Work	77
3.7 Conclusions and Extensions	78

4

HOTFRAME: A Heuristic Optimization Framework 81

Andreas Fink and Stefan Voß

4.1	Introduction	81
4.2	A Brief Overview	83
4.3	Analysis	85
4.4	Design	103
4.5	Implementation	137
4.6	Application	146
4.7	Conclusions	153

5

Writing Local Search Algorithms Using EASYLOCAL++ 155

Luca Di Gaspero and Andrea Schaerf

5.1	Introduction	155
5.2	An Overview of EASYLOCAL++	156
5.3	The COURSE TIMETABLING Problem	161
5.4	Solving COURSE TIMETABLING Using EASYLOCAL++	162
5.5	Debugging and Running the Solver	172
5.6	Discussion and Conclusions	174

6

Integrating Heuristic Search and One-Way Constraints in the iOpt Toolkit 177

Christos Voudouris and Raphaël Dorne

6.1	Introduction	177
6.2	One-Way Constraints	178
6.3	Constraint Satisfaction Algorithms for One-Way Constraints	179
6.4	The Invariant Library of iOpt	180
6.5	The Heuristic Search Framework of iOpt	182
6.6	Experimentation on the Graph Coloring and the Vehicle Routing Problem	186
6.7	Related Work and Discussion	190
6.8	Conclusions	190

7

The OptQuest Callable Library 193

Manuel Laguna and Rafael Martí

7.1	Introduction	193
7.2	Scatter Search	196
7.3	The OCL Optimizer	198
7.4	OCL Functionality	202
7.5	OCL Application	211
7.6	Conclusions	215

8

A Constraint Programming Toolkit for Local Search 219

Paul Shaw, Vincent Furnon and Bruno De Backer

8.1	Introduction	219
8.2	Constraint Programming Preliminaries	221
8.3	The Local Search Toolkit	225
8.4	Industrial Example: Facility Location	239
8.5	Extending the Toolkit	249
8.6	Specializing the Toolkit: ILOG Dispatcher	250

8.7	Related Work	259
8.8	Conclusion	260
9		
	The Modeling Language OPL – A Short Overview	263
	<i>Pascal Van Hentenryck and Laurent Michel</i>	
9.1	Introduction	263
9.2	Frequency Allocation	265
9.3	Sport Scheduling	269
9.4	Job-Shop Scheduling	276
9.5	The Trolley Application	279
9.6	Research Directions	290
9.7	Conclusion	294
10		
	Genetic Algorithm Optimization Software Class Libraries	295
	<i>Andrew R. Pain and Colin R. Reeves</i>	
10.1	Introduction	296
10.2	C++ Class Library Software	304
10.3	Java Class Library Software	317
10.4	Genetic Algorithm Optimization Software Survey	319
10.5	Conclusions	328
	Abbreviations	331
	References	335
	Index	357
