Preface	xv
---------	----

Part I Vortex structure, stability and evolution

Simulation of vortex sheet roll-up: chaos, azimuthal waves, ring merger <i>Robert KRASNY, Keith LINDSAY & Monika NITSCHÉ</i>	3
Merging of non-symmetric Burgers vortices <i>Keith HIGGINS, M. S. CHONG & Andrew OOI</i>	13
Effect of stretching on vortices with axial flow <i>Maurice ROSSI, Ivan DELBENDE & Stéphane LE DIZÈS</i>	19
Optimal two-dimensional perturbations in a stretched shear layer <i>Stéphane LE DIZÈS</i>	25
Advection–diffusion of a passive scalar in the flow of a decaying vortex <i>Konrad BAJER, Andrew P. BASSOM & Andrew D. GILBERT</i>	31
Linear stability of a vortex ring revisited <i>Yasuhide FUKUMOTO & Yuji HATTORI</i>	37
The Vortex–in–cell method for the study of three–dimensional vortex structures <i>Henryk KUDELA & Paweł REGUCCI</i>	49
L-transition from right-to left-handed helical vortices <i>Valery OKULOV, Jens N. SØRENSEN & Lars K. VOIGT</i>	55
Dynamical behaviour of counter-current axisymmetric shear flows <i>Xilin XIE, Weiwei MA & Huiliang ZHOU</i>	61

Part II Singular vortex filaments

Complexity measures of tangled vortex filaments <i>Carlo F. BARENGHI, David C. SAMUELS & Renzo L. RICCA</i>	69
--	----

Corotating five point vortices in a plane <i>Tatsuyuki NAKAKI</i>	75
On motion of a double helical vortex in a cylindrical tube <i>Pavel A. KUIBIN</i>	81
Intensive and weak mixing in the chaotic region of a velocity field <i>Alexandre GOURJII</i>	87
Evolution of the anisotropy of the quantum vortex tangle <i>Tomasz LIPNIACKI</i>	93
Motion of vortex lines in quantum mechanics <i>Cezary ŚLIWA, Iwo BIALYNICKI-BIRULA, Zofia BIALYNICKA-BIRULA & Tomasz MŁODUCHOWSKI</i>	99

Part III Magnetic structure, topology and reconnection

Magnetic dissipation: spatial and temporal structure <i>Åke NORDLUND</i>	107
Current sheets in the Sun's corona <i>Eric PRIEST</i>	115
A model for magnetic reconnection <i>H.K. MOFFATT & R.E. HUNT</i>	125
Reconnection in magnetic and vorticity fields <i>Gunnar HORNIG</i>	133
Energy, helicity and crossing number relations for complex flows <i>Renzo L. RICCA</i>	139
Helicity conservation laws <i>Zbigniew PERADZYŃSKI</i>	145
A third-order topological invariant for three magnetic fields <i>Christoph MAYER & Gunnar HORNIG</i>	151
Asymptotic structure of fast dynamo eigenfunctions <i>B. J. BAYLY</i>	157

Part IV Vortex structure in turbulent flow

Vortex tubes, spirals, and large-eddy simulation of turbulence <i>D.I. PULLIN</i>	171
Low-pressure vortex analysis in turbulence: life, structure, and dynamical role of vortices <i>Shigeo KIDA, Susumu GOTO & Takafumi MAKIHARA</i>	181

Vortex bi-layers and the emergence of vortex projectiles in compressible accelerated inhomogeneous flows (AIFs)	191
<i>Norman J. ZABUSKY & Shuang ZHANG</i>	
Interaction of localised packets of vorticity with turbulence	201
<i>A. LEONARD</i>	
Extraction of coherent vortex tubes in a 3D turbulent mixing layer using orthogonal wavelets	211
<i>Kai SCHNEIDER & Marie FARGE</i>	
Vortex tubes in shear-stratified turbulent flows	217
<i>Marie FARGE, Alexandre AZZALINI, Alex MAHALOV, Basil NICOLAENKO, Frank TSE, Giulio PELLEGRINO & Kai SCHNEIDER</i>	
Coherent dynamics in wall turbulence	229
<i>Javier JIMÉNEZ,</i>	
Some characteristics of the coherent structures in turbulent boundary layers	241
<i>Davide POGGI</i>	
A singularity-free model of the local velocity gradient and acceleration gradient structure of turbulent flow	247
<i>Brian CANTWELL</i>	
Spiral small-scale structures in compressible turbulent flows	261
<i>Thomas GOMEZ, Hélène POLITANO, Annick POUQUET & Michèle LARCHEVÊQUE</i>	
Part V Finite-time singularity problems	
Discrete groups, symmetric flows and hydrodynamic blowup	269
<i>Richard B. PELZ</i>	
Diffusion of Lagrangian invariants in the Navier-Stokes equations	285
<i>Peter CONSTANTIN</i>	
Evidence for singularity formation in a class of stretched solutions of the equations for ideal MHD	295
<i>J. D. GIBBON & K. OHKITANI</i>	
Numerical evidence of breaking of vortex lines in an ideal fluid	305
<i>Evgeniy A. KUZNETSOV, Olga M. PODVIGINA & Vladislav A. ZHELIGOVSKY</i>	
Sufficient condition for finite-time singularity and tendency towards self-similarity in a high-symmetry flow	317
<i>C. S. NG & A. BHATTACHARJEE</i>	
Finite time singularities in a class of hydrodynamic models	329
<i>Victor P. RUBAN, Dmitry I. PODOLSKY & Jens J. RASMUSSEN</i>	

On stabilisation of solutions of singular quasi-linear parabolic equations with singular potentials	335
<i>Andrey MURAVNIK</i>	

Part VI Stokes flow and singular behaviour near boundaries

Interactions between two close spheres in Stokes flow	343
<i>Maria L. EKIŁ-JEŻEWSKA, Nicolas LECOQ, René ANTHORE,</i> <i>François BOSTEL & François FEUILLEBOIS</i>	
Effective boundary conditions for creeping flow along a periodic rough surface	349
<i>B. CICHOCKI, P. SZYMCAK & F. FEUILLEBOIS</i>	
Steady Stokes flow in a trihedral corner	355
<i>Vladimir S. MALYUGA & Alexandre M. GOMILKO</i>	
After-dinner speeches	361
List of Participants	365
Author Index	367
Topic Index	373
